**DETAILED ACTION**

**EXAMINER'S AMENDMENT**

1. On page 4 of the specification, Line 12, the phrase "having good a thermal" has been changed to - - having a good thermal - -

In claim 1, line 5 the phrase, "and housing housings" has been changed to - - and outer housings - -

In claim 1, lines 6-7 the phrase, "wherein, between two adjacent partitions is formed with a path penetrating through the housing" has been changed to - - wherein paths penetrating through the housing are formed between two adjacent partitions - -

In claim 1, lines 11-13 the phrase, "(odd-number path each having an opening at a front end portion thereof, an each even-number path having an opening at a rear end portion thereof)" has been changed to - - (odd-number paths each having an opening at a front end portion thereof, and even number paths each having an opening at a rear end portion thereof) - -

In claim 1, line 20 the phrase, "and a pump; and can be directly" has been changed to - - and a pump which can be directly - -

The above amendments to the claims are merely changes to minor informalities and do not change the scope of the claim(s).

***Allowable Subject Matter***

2. Claims 1-2 are allowed.

The following is an examiner's statement of reasons for allowance:

The allowability resides in the overall structure of the device as recited in independent claim 1 and at least in part because claim 1 recites, "odd-number paths each having an opening at a front end portion thereof, and even number paths each having an opening at a rear end portion thereof", "a plurality of transverse partitions between the inner and outer housings", "a cooling liquid is poured into the housing" and "a pump which can be directly attached to a CPU or disc drive".

The aforementioned limitations in combination with all remaining limitations of claim 1 are believed to render said claim 1 and all claims dependent therefrom (2) patentable over the art of record.

The closest reference to the present invention is believed to be McDunn et al. (US 5,831,824). McDunn et al. teaches a housing having paths (32, 34, etc.), and sealing panels (46, 48, 60), however McDunn et al. fails to teach a pump which can be directly attached to a CPU or a hard disc of a computer, and further that the "cooling liquid is poured into the housing".

US 6,816,561; US 5,675,473; US 6,442,023; US 6,763,880; US 6,609,561; US 5,764,483 all further teach liquid cooling.

The above cited references, either taken alone or in combination, are not believed to render the present invention unpatentable as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
